

Here is your updated, production-ready single-page HTML website code. It features a premium, high-contrast data science dark aesthetic using a deep navy blue background, a striking vibrant orange for the hero title, and all requested layout restructurings executed without placeholders or shortcuts.

A Machine Learning Analysis of Commercialization Within the #tcm Creator Economy

Rather than over-commercializing indefinitely, independent creators in the traditional Chinese Medicine space strategically bound explicit business signals to protect audience trust and safeguard their social capital.

Victoria Tan

The Core Problem & Hypothesis

The Structural Trap

Social media data infrastructures enforce a rigid binary between

personal curation and commercial intent Standard machine learning

evaluation pipelines systematically default to maximize overall raw accuracy, creating

shortcuts that render niche minority subcultures structurally invisible due to major class

imbalances

Why It Matters

Tracking the viral **China**maxxing trend on social platforms

shows Western and Asian creators sharing global wellness traditions. Evaluating how

digital subcommunities navigate corporate pressures is critical to understanding

cross-cultural appropriation and preventing algorithmic erasure of niche communities
